German security and
guaranteed anonymity

Who we are

Our company was born over 10 years ago and from 2008 until today we have protected and saved many assets. BonusOro can boast as business partners 6 of the largest gold refineries in Germany, with which it has a relationship of absolute trust since 2008.

Our corporate headquarters is based in Darmstadt, near Frankfurt and we operate in several European countries in addition to Germany, such as Italy, Russia, Spain and Turkey. Our goal for the coming years is to consolidate our presence also in the United States and the Middle East. Our team consists of physical gold operators, financial advisors, consultants, agents and lawyers, together with a Social Media Marketing team. Our way of working is through a win-win relationship, which we believe is not only beneficial for our employees, but also for our customers around the world who will find greater satisfaction and greater efficiency of services.

Physical protection

Investing in gold in Germany is a great way to protect your assets from physical risks. Unlike money in a bank account, which is immaterial and untouchable, gold is a tangible asset that can be touched and taken in hand. Our company deposits the gold of its customers in armored vaults and equipped with the most advanced technologies. To get inside the vault, you must first pass through a double security electronic security gate. By entering an identification number and a self-configured PIN, it is possible to go through the gate and enter the basement. To unlock the safe you need the customer's key, delivered at the time of signing the contract, and an additional security key, which will be provided by our staff. Also, before the gate there is an armed guard to keep watch. Our customers' vaults are obsessively protected.

Does BonusOro have access to its customers' vault?

Absolutely not. Each vault is opened using a double-block system: the key held by the customer and the one held by our staff, delivered to the customer whenever he wants to get inside the vault. Each vault requires both keys to gain access, neither we with our key nor the customer with his own can open the safe autonomously.

No inflation risk and no default risk

Gold is 100% exempt from the risk of inflation, devaluation and default, unlike paper currencies that can very well completely lose their value (a phenomenon called default), or partially lose their value (a phenomenon called devaluation). Another danger is the outbreak of inflation. When there is inflation, the cost of living increases for everyone, causing serious damage to families and businesses.

Gold has never undergone inflation in 6000 years, its value must always be converted equally into every currency in the world. If, for example, the euro currency will default, the price of gold will be brought to the value prior to the devaluation in the new currency that will come into force. It is precisely for this reason that the yellow metal is considered a safe haven asset.

Property

The client's gold (all our gold bars are pure 24-carat gold 999.9 and are certified by LBMA), although temporarily deposited in our vaults, is always his property. Our company doesn't hold co-ownership shares. The customer can retrieve his gold at any time and manage it at will. If the customer wishes to visit his vault, he can do so at any time.

At the beginning of the investment, the client receives numerous certificates from our company, including the ownership certificates, which certify the ownership of the gold, and the LBMA certificates, which are useful in the resale phase.

Privacy is our strength

We like to be discreet and we like to guarantee our customers the most absolute privacy. For this reason we don't store customer data in electronic databases and we don't exchange their data with anyone, unlike what happens elsewhere.

By investing in gold in Germany, no one will know it.

We repurchase our customers' gold at any time

Our customers can resell all their gold at any time. We guarantee the repurchase. If the customer wants to terminate the contract he can do so at any time he wants without paying any penalty.

VAT exempt

Investing in gold in Germany also means saving. In fact, unlike any other physical asset, gold is not taxed in Germany, according to the German tax law. Our customers doesn't pay tax or duty to buy and hold physical gold in Germany.

Assured assets for the exact value

The sums deposited in current and deposit accounts are covered by an insurance that guarantees for each account holder up to a maximum of \$ 250,000 of the amount deposited in each bank in which the account holder holds an account. However, in this period of extreme instability, it would not be unusual to receive bad surprises even concerning the bank guarantee.

By investing in gold in Germany, your assets are insured for the exact amount.

The price of gold is constantly rising and will rise again

Demand and supply levels indicate that gold remains a highly sought-after choice, both by states and institutions and by private individuals. Lately, global central banks, particularly those in Russia and China, have rapidly increased their gold reserves with billions of dollars of gold buying. The trend should continue due to commercial tensions and markets uncertainty. Therefore, huge purchases of gold by institutional bodies cause a positive chain reaction. In this way, in fact, demand also grows among private investors who, influenced by the choices of central banks, buy gold, causing an increase in prices.

However, it has long been known that gold is one of the preferred choices by investors around the world to diversify their investments. Already the ancient Egyptians in 6000 BC used this metal as a symbol of wealth. Gold has shifted the interests of nations and powerful individuals. Monetary policy is on the verge of collapse: the world is increasingly indebted.

Just think that the United States alone holds a public debt of \$ 22,829,698,000,000. Leaving money in this circle of fire means taking risks. Gold is the only solution, because it is not directly influenced by the economic policies of each individual country and cannot be repudiated or "frozen" as in the case of currencies, as it is not "issued" by a central bank, but by nature itself.
